Revisit multiplication by one digit

Use the scaffold, show each step and ask for an adult check when marked.

Name: ____ Date: __________________

1. Read the model: Calculate 3,482 x 6. Copy or complete the first step.

2. Calculate 4,706 x 7.

3. Calculate 8,035 x 4.

4. Miro says: Miro forgets to include the exchanged tens when multiplying the next digit. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate 3,482 x 6. Copy or complete the first step.
   Answer 20,892.

2. Calculate 4,706 x 7.
   Answer 32,942.

3. Calculate 8,035 x 4.
   Answer 32,140.

4. Miro says: Miro forgets to include the exchanged tens when multiplying the next digit. Is this correct? Explain.
   Answer Record each exchange clearly and add it to the next place-value product.

Revisit multiplication by one digit

Work independently. Show a complete method and check at least one answer.

Name: ____ Date: __________________

1. Calculate 4,706 x 7.

2. Calculate 8,035 x 4.

3. A product is 27,648 and one factor is 8. What is the other factor?

4. Identify and correct this misconception: Miro forgets to include the exchanged tens when multiplying the next digit.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate 4,706 x 7.
   Answer 32,942.

2. Calculate 8,035 x 4.
   Answer 32,140.

3. A product is 27,648 and one factor is 8. What is the other factor?
   Answer 3,456.

4. Identify and correct this misconception: Miro forgets to include the exchanged tens when multiplying the next digit.
   Answer Record each exchange clearly and add it to the next place-value product.

5. Write a complete sentence explaining how you checked one answer.
   Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Revisit multiplication by one digit

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: ______________________________ Date: ____________

1. A product is 27,648 and one factor is 8. What is the other factor?

2. Explain why this reasoning fails: Miro forgets to include the exchanged tens when multiplying the next digit.

3. Create a new example that tests the same idea as: Calculate 8,035 x 4.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. A product is 27,648 and one factor is 8. What is the other factor?
   Answer 3,456.

2. Explain why this reasoning fails: Miro forgets to include the exchanged tens when multiplying the next digit.
   Answer Record each exchange clearly and add it to the next place-value product.

3. Create a new example that tests the same idea as: Calculate 8,035 x 4.
   Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.
   Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.
   Answer Answers vary. A valid example and counterexample should support the classification.
