Solve long multiplication problems

Use the scaffold, show each step and ask for an adult check when marked.

Name: ____ Date: ________________

1. Read the model: A theatre has 1,248 seats in each of 24 identical sections. How many seats are there? Copy or complete the first step.

2. A factory packs 2,315 items each day for 32 days. How many items?

3. A school orders 48 boxes of 1,275 pencils. How many pencils?

4. Miro says: Miro calculates correctly but gives a product with no unit or context. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: A theatre has 1,248 seats in each of 24 identical sections. How many seats are there? Copy or complete the first step.
   Answer 29,952 seats.

2. A factory packs 2,315 items each day for 32 days. How many items?
   Answer 74,080 items.

3. A school orders 48 boxes of 1,275 pencils. How many pencils?
   Answer 61,200 pencils.

4. Miro says: Miro calculates correctly but gives a product with no unit or context. Is this correct? Explain.
   Answer Return to the question, label the answer and complete every step in the context.

Solve long multiplication problems

Work independently. Show a complete method and check at least one answer.

Name: ____ Date: __________________

1. A factory packs 2,315 items each day for 32 days. How many items?

2. A school orders 48 boxes of 1,275 pencils. How many pencils?

3. The school gives 18 pencils to each of 3,200 pupils. How many remain from 61,200?

4. Identify and correct this misconception: Miro calculates correctly but gives a product with no unit or context.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. A factory packs 2,315 items each day for 32 days. How many items?
   Answer 74,080 items.

2. A school orders 48 boxes of 1,275 pencils. How many pencils?
   Answer 61,200 pencils.

3. The school gives 18 pencils to each of 3,200 pupils. How many remain from 61,200?
   Answer 3,600 pencils.

4. Identify and correct this misconception: Miro calculates correctly but gives a product with no unit or context.
   Answer Return to the question, label the answer and complete every step in the context.

5. Write a complete sentence explaining how you checked one answer.
   Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Solve long multiplication problems

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: ____ Date: __________________

1. The school gives 18 pencils to each of 3,200 pupils. How many remain from 61,200?

2. Explain why this reasoning fails: Miro calculates correctly but gives a product with no unit or context.

3. Create a new example that tests the same idea as: A school orders 48 boxes of 1,275 pencils. How many pencils?

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. The school gives 18 pencils to each of 3,200 pupils. How many remain from 61,200?
   Answer 3,600 pencils.

2. Explain why this reasoning fails: Miro calculates correctly but gives a product with no unit or context.
   Answer Return to the question, label the answer and complete every step in the context.

3. Create a new example that tests the same idea as: A school orders 48 boxes of 1,275 pencils. How many pencils?
   Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.
   Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.
   Answer Answers vary. A valid example and counterexample should support the classification.
