

Round to ten thousand, hundred thousand and one million

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Round 6,748,219 to the nearest 10,000, 100,000 and 1,000,000. Copy or complete the first step.

2. Round 3,451,200 to the nearest 100,000.

3. Round 8,249,999 to the nearest 1,000,000.

4. Miro says: Miro keeps all the digits after the rounding place unchanged. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Round 6,748,219 to the nearest 10,000, 100,000 and 1,000,000. Copy or complete the first step.

Answer 6,750,000; 6,700,000; 7,000,000.

2. Round 3,451,200 to the nearest 100,000.

Answer 3,500,000.

3. Round 8,249,999 to the nearest 1,000,000.

Answer 8,000,000.

4. Miro says: Miro keeps all the digits after the rounding place unchanged. Is this correct? Explain.

Answer After rounding, every digit to the right becomes zero.

Round to ten thousand, hundred thousand and one million

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Round 3,451,200 to the nearest 100,000.

2. Round 8,249,999 to the nearest 1,000,000.

3. Find the greatest number that rounds to 6,000,000 to the nearest million.

4. Identify and correct this misconception: Miro keeps all the digits after the rounding place unchanged.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Round 3,451,200 to the nearest 100,000.
Answer 3,500,000.
2. Round 8,249,999 to the nearest 1,000,000.
Answer 8,000,000.
3. Find the greatest number that rounds to 6,000,000 to the nearest million.
Answer 6,499,999.
4. Identify and correct this misconception: Miro keeps all the digits after the rounding place unchanged.
Answer After rounding, every digit to the right becomes zero.
5. Write a complete sentence explaining how you checked one answer.
Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Round to ten thousand, hundred thousand and one million

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Find the greatest number that rounds to 6,000,000 to the nearest million.

2. Explain why this reasoning fails: Miro keeps all the digits after the rounding place unchanged.

3. Create a new example that tests the same idea as: Round 8,249,999 to the nearest 1,000,000.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Find the greatest number that rounds to 6,000,000 to the nearest million.
Answer 6,499,999.
2. Explain why this reasoning fails: Miro keeps all the digits after the rounding place unchanged.
Answer After rounding, every digit to the right becomes zero.
3. Create a new example that tests the same idea as: Round 8,249,999 to the nearest 1,000,000.
Answer Answers vary. The example and solution must preserve the mathematical structure.
4. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
5. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
