

Estimate quotients using multiples

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Use short division by one digit, recall multiplication facts and identify multiples.

2. Estimate $5,985 \div 31$.

3. Explain the first step you would take for: Estimate and then calculate $7,392 \div 24$.

4. Miro says: Miro estimates division by rounding only the dividend. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Use short division by one digit, recall multiplication facts and identify multiples.

Answer Pupil identifies a relevant fact, representation or method.

2. Estimate $5,985 \div 31$.

Answer About 200 because $6,000 \div 30$ is 200.

3. Explain the first step you would take for: Estimate and then calculate $7,392 \div 24$.

Answer Estimate the quotient using a nearby multiple.

4. Miro says: Miro estimates division by rounding only the dividend. What should Miro check?

Answer Round both numbers to compatible values that are easy to divide.
