

Interpret division remainders

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $6,745 \div 32$ and interpret the answer for 32-seat coaches. Copy or complete the first step.

2. Calculate $5,126 \div 24$ and write the remainder as a fraction.

3. Share 3,850 stickers equally among 16 classes. How many each and how many left?

4. Miro says: Miro always rounds a quotient with a remainder up. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $6,745 \div 32$ and interpret the answer for 32-seat coaches. Copy or complete the first step.

Answer 210 remainder 25, so 211 coaches are needed.

2. Calculate $5,126 \div 24$ and write the remainder as a fraction.

Answer 213 remainder 14, or $213 \frac{7}{12}$.

3. Share 3,850 stickers equally among 16 classes. How many each and how many left?

Answer 240 each with 10 left.

4. Miro says: Miro always rounds a quotient with a remainder up. Is this correct? Explain.

Answer The context decides whether to round up, round down, keep the remainder or express it as a fraction.

Interpret division remainders

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $5,126 \div 24$ and write the remainder as a fraction.

2. Share 3,850 stickers equally among 16 classes. How many each and how many left?

3. A 2,500 ml drink fills 180 ml cups. How many full cups?

4. Identify and correct this misconception: Miro always rounds a quotient with a remainder up.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $5,126 \div 24$ and write the remainder as a fraction.

Answer 213 remainder 14, or $213 \frac{7}{12}$.

2. Share 3,850 stickers equally among 16 classes. How many each and how many left?

Answer 240 each with 10 left.

3. A 2,500 ml drink fills 180 ml cups. How many full cups?

Answer 13 full cups with 160 ml left.

4. Identify and correct this misconception: Miro always rounds a quotient with a remainder up.

Answer The context decides whether to round up, round down, keep the remainder or express it as a fraction.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Interpret division remainders

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. A 2,500 ml drink fills 180 ml cups. How many full cups?

2. Explain why this reasoning fails: Miro always rounds a quotient with a remainder up.

3. Create a new example that tests the same idea as: Share 3,850 stickers equally among 16 classes. How many each and how many left?

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. A 2,500 ml drink fills 180 ml cups. How many full cups?

Answer 13 full cups with 160 ml left.

2. Explain why this reasoning fails: Miro always rounds a quotient with a remainder up.

Answer The context decides whether to round up, round down, keep the remainder or express it as a fraction.

3. Create a new example that tests the same idea as: Share 3,850 stickers equally among 16 classes. How many each and how many left?

Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.

Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.

Answer Answers vary. A valid example and counterexample should support the classification.
