

Use long division with exact answers

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $8,736 \div 24$. Copy or complete the first step.

2. Calculate $9,408 \div 32$.

3. Calculate $7,245 \div 35$.

4. Miro says: Miro subtracts the multiple correctly but forgets to bring down the next digit. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $8,736 \div 24$. Copy or complete the first step.
Answer 364.
2. Calculate $9,408 \div 32$.
Answer 294.
3. Calculate $7,245 \div 35$.
Answer 207.
4. Miro says: Miro subtracts the multiple correctly but forgets to bring down the next digit. Is this correct? Explain.
Answer After each subtraction, bring down exactly one next place-value digit.

Use long division with exact answers

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $9,408 \div 32$.

2. Calculate $7,245 \div 35$.

3. Calculate $9,984 \div 48$ and prove the answer by multiplication.

4. Identify and correct this misconception: Miro subtracts the multiple correctly but forgets to bring down the next digit.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $9,408 \div 32$.
Answer 294.
2. Calculate $7,245 \div 35$.
Answer 207.
3. Calculate $9,984 \div 48$ and prove the answer by multiplication.
Answer 208 because $208 \times 48 = 9,984$.
4. Identify and correct this misconception: Miro subtracts the multiple correctly but forgets to bring down the next digit.
Answer After each subtraction, bring down exactly one next place-value digit.
5. Write a complete sentence explaining how you checked one answer.
Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Use long division with exact answers

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Calculate $9,984 \div 48$ and prove the answer by multiplication.

2. Explain why this reasoning fails: Miro subtracts the multiple correctly but forgets to bring down the next digit.

3. Create a new example that tests the same idea as: Calculate $7,245 \div 35$.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Calculate $9,984 \div 48$ and prove the answer by multiplication.
Answer 208 because $208 \times 48 = 9,984$.
2. Explain why this reasoning fails: Miro subtracts the multiple correctly but forgets to bring down the next digit.
Answer After each subtraction, bring down exactly one next place-value digit.
3. Create a new example that tests the same idea as: Calculate $7,245 \div 35$.
Answer Answers vary. The example and solution must preserve the mathematical structure.
4. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
5. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
