

Find common multiples

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Find the lowest common multiple of 18 and 24. Copy or complete the first step.

2. Write the first three common multiples of 6 and 8.

3. Find the LCM of 15 and 20.

4. Miro says: Miro lists factors when the question asks for multiples. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Find the lowest common multiple of 18 and 24. Copy or complete the first step.

Answer 72.

2. Write the first three common multiples of 6 and 8.

Answer 24, 48 and 72.

3. Find the LCM of 15 and 20.

Answer 60.

4. Miro says: Miro lists factors when the question asks for multiples. Is this correct? Explain.

Answer Multiples continue from repeated multiplication. Factors divide the number exactly.

Find common multiples

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Write the first three common multiples of 6 and 8.

2. Find the LCM of 15 and 20.

3. Two traffic lights flash every 12 and 18 seconds. They flash together now. When next?

4. Identify and correct this misconception: Miro lists factors when the question asks for multiples.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Write the first three common multiples of 6 and 8.

Answer 24, 48 and 72.

2. Find the LCM of 15 and 20.

Answer 60.

3. Two traffic lights flash every 12 and 18 seconds. They flash together now. When next?

Answer After 36 seconds.

4. Identify and correct this misconception: Miro lists factors when the question asks for multiples.

Answer Multiples continue from repeated multiplication. Factors divide the number exactly.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Find common multiples

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Two traffic lights flash every 12 and 18 seconds. They flash together now. When next?

2. Explain why this reasoning fails: Miro lists factors when the question asks for multiples.

3. Create a new example that tests the same idea as: Find the LCM of 15 and 20.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Two traffic lights flash every 12 and 18 seconds. They flash together now. When next?
Answer After 36 seconds.
2. Explain why this reasoning fails: Miro lists factors when the question asks for multiples.
Answer Multiples continue from repeated multiplication. Factors divide the number exactly.
3. Create a new example that tests the same idea as: Find the LCM of 15 and 20.
Answer Answers vary. The example and solution must preserve the mathematical structure.
4. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
5. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
