

Read and structure expressions

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Describe the calculation $48 - 6 \times 5$ without solving it. Copy or complete the first step.

2. Which operation happens first in $72 \div 8 + 4$?

3. Write an expression for subtract 7 from the product of 9 and 6.

4. Miro says: Miro reads every expression strictly from left to right. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Describe the calculation $48 - 6 \times 5$ without solving it. Copy or complete the first step.

Answer Multiply 6 by 5, then subtract the product from 48.

2. Which operation happens first in $72 \div 8 + 4$?

Answer Division.

3. Write an expression for subtract 7 from the product of 9 and 6.

Answer $9 \times 6 - 7$.

4. Miro says: Miro reads every expression strictly from left to right. Is this correct? Explain.

Answer The structure of the expression determines the order, not reading direction alone.

Read and structure expressions

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Which operation happens first in $72 \div 8 + 4$?

2. Write an expression for subtract 7 from the product of 9 and 6.

3. Insert brackets into $8 + 4 \times 3$ to make the answer 36.

4. Identify and correct this misconception: Miro reads every expression strictly from left to right.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Which operation happens first in $72 \div 8 + 4$?

Answer Division.

2. Write an expression for subtract 7 from the product of 9 and 6.

Answer $9 \times 6 - 7$.

3. Insert brackets into $8 + 4 \times 3$ to make the answer 36.

Answer $(8 + 4) \times 3 = 36$.

4. Identify and correct this misconception: Miro reads every expression strictly from left to right.

Answer The structure of the expression determines the order, not reading direction alone.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Read and structure expressions

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Insert brackets into $8 + 4 \times 3$ to make the answer 36.

2. Explain why this reasoning fails: Miro reads every expression strictly from left to right.

3. Create a new example that tests the same idea as: Write an expression for subtract 7 from the product of 9 and 6.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Insert brackets into $8 + 4 \times 3$ to make the answer 36.

Answer $(8 + 4) \times 3 = 36$.

2. Explain why this reasoning fails: Miro reads every expression strictly from left to right.

Answer The structure of the expression determines the order, not reading direction alone.

3. Create a new example that tests the same idea as: Write an expression for subtract 7 from the product of 9 and 6.

Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.

Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.

Answer Answers vary. A valid example and counterexample should support the classification.
