

Use brackets to change the order

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $240 \div (8 + 4)$. Copy or complete the first step.

2. Calculate $(75 - 27) \times 6$.

3. Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.

4. Miro says: Miro ignores brackets because division normally comes first. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $240 \div (8 + 4)$. Copy or complete the first step.
Answer 20.
2. Calculate $(75 - 27) \times 6$.
Answer 288.
3. Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.
Answer 56 and 120.
4. Miro says: Miro ignores brackets because division normally comes first. Is this correct? Explain.
Answer Brackets override the usual priority and must be completed first.

Use brackets to change the order

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $(75 - 27) \times 6$.

2. Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.

3. Place one pair of brackets in $100 - 20 \div 4 + 1$ to make the answer 21.

4. Identify and correct this misconception: Miro ignores brackets because division normally comes first.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $(75 - 27) \times 6$.

Answer 288.

2. Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.

Answer 56 and 120.

3. Place one pair of brackets in $100 - 20 \div 4 + 1$ to make the answer 21.

Answer $(100 - 20) \div 4 + 1 = 21$.

4. Identify and correct this misconception: Miro ignores brackets because division normally comes first.

Answer Brackets override the usual priority and must be completed first.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Use brackets to change the order

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Place one pair of brackets in $100 - 20 / 4 + 1$ to make the answer 21.

2. Explain why this reasoning fails: Miro ignores brackets because division normally comes first.

3. Create a new example that tests the same idea as: Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Place one pair of brackets in $100 - 20 / 4 + 1$ to make the answer 21.
Answer $(100 - 20) / 4 + 1 = 21$.
2. Explain why this reasoning fails: Miro ignores brackets because division normally comes first.
Answer Brackets override the usual priority and must be completed first.
3. Create a new example that tests the same idea as: Compare $16 + 8 \times 5$ with $(16 + 8) \times 5$.
Answer Answers vary. The example and solution must preserve the mathematical structure.
4. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
5. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
