

Use multiplication and division before addition and subtraction

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $18 + 6 \times 7$. Copy or complete the first step.

2. Calculate $90 - 36 \div 6$.

3. Calculate $120 \div 5 + 8 \times 3$.

4. Miro says: Miro adds 18 and 6 before multiplying by 7. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $18 + 6 \times 7$. Copy or complete the first step.
Answer 60.
2. Calculate $90 - 36 \div 6$.
Answer 84.
3. Calculate $120 \div 5 + 8 \times 3$.
Answer 48.
4. Miro says: Miro adds 18 and 6 before multiplying by 7. Is this correct? Explain.
Answer Multiplication has priority, so calculate 6×7 first.

Use multiplication and division before addition and subtraction

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $90 - 36 \div 6$.

2. Calculate $120 \div 5 + 8 \times 3$.

3. Use the digits 2, 4 and 8 once to make an expression with answer 34.

4. Identify and correct this misconception: Miro adds 18 and 6 before multiplying by 7.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $90 - 36 \div 6$.

Answer 84.

2. Calculate $120 \div 5 + 8 \times 3$.

Answer 48.

3. Use the digits 2, 4 and 8 once to make an expression with answer 34.

Answer One answer is $2 + 4 \times 8 = 34$.

4. Identify and correct this misconception: Miro adds 18 and 6 before multiplying by 7.

Answer Multiplication has priority, so calculate 6×7 first.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Use multiplication and division before addition and subtraction

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Use the digits 2, 4 and 8 once to make an expression with answer 34.

2. Explain why this reasoning fails: Miro adds 18 and 6 before multiplying by 7.

3. Create a new example that tests the same idea as: Calculate $120 \div 5 + 8 \times 3$.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Use the digits 2, 4 and 8 once to make an expression with answer 34.

Answer One answer is $2 + 4 \times 8 = 34$.

2. Explain why this reasoning fails: Miro adds 18 and 6 before multiplying by 7.

Answer Multiplication has priority, so calculate 6×7 first.

3. Create a new example that tests the same idea as: Calculate $120 / 5 + 8 \times 3$.

Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.

Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.

Answer Answers vary. A valid example and counterexample should support the classification.
