

Use mental multiplication and division strategies

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Recall number facts and use place value, partitioning, compensation and inverse operations.

2. Calculate $4,800 \div 16$ mentally.

3. Explain the first step you would take for: Calculate $25 \times 3,600$ mentally.

4. Miro says: Miro divides by 4 when multiplying by 25 but forgets to multiply by 100. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Recall number facts and use place value, partitioning, compensation and inverse operations.

Answer Pupil identifies a relevant fact, representation or method.

2. Calculate $4,800 \div 16$ mentally.

Answer 300.

3. Explain the first step you would take for: Calculate $25 \times 3,600$ mentally.

Answer Notice the number structure before choosing a method.

4. Miro says: Miro divides by 4 when multiplying by 25 but forgets to multiply by 100. What should Miro check?

Answer Since $25 = 100 \div 4$, divide by 4 and then multiply by 100.
