

Fluency with the four operations

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $638,475 + 274,806$ and $902,140 - 386,759$. Copy or complete the first step.

2. Calculate $6,304 \times 27$.

3. Calculate $8,736 \div 24$.

4. Miro says: Miro switches methods without checking which operation the question uses. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $638,475 + 274,806$ and $902,140 - 386,759$. Copy or complete the first step.
Answer 913,281 and 515,381.
2. Calculate $6,304 \times 27$.
Answer 170,208.
3. Calculate $8,736 \div 24$.
Answer 364.
4. Miro says: Miro switches methods without checking which operation the question uses. Is this correct? Explain.
Answer Mark the operation and estimate before beginning the exact method.

Fluency with the four operations

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $6,304 \times 27$.

2. Calculate $8,736 \div 24$.

3. Choose operations to make a true equation using 48, 12 and 4.

4. Identify and correct this misconception: Miro switches methods without checking which operation the question uses.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $6,304 \times 27$.
Answer 170,208.
2. Calculate $8,736 \div 24$.
Answer 364.
3. Choose operations to make a true equation using 48, 12 and 4.
Answer Examples include $48 \div 12 = 4$ and $12 \times 4 = 48$.
4. Identify and correct this misconception: Miro switches methods without checking which operation the question uses.
Answer Mark the operation and estimate before beginning the exact method.
5. Write a complete sentence explaining how you checked one answer.
Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Fluency with the four operations

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Choose operations to make a true equation using 48, 12 and 4.

2. Explain why this reasoning fails: Miro switches methods without checking which operation the question uses.

3. Create a new example that tests the same idea as: Calculate $8,736 \div 24$.

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. Choose operations to make a true equation using 48, 12 and 4.
Answer Examples include $48 \div 12 = 4$ and $12 \times 4 = 48$.
2. Explain why this reasoning fails: Miro switches methods without checking which operation the question uses.
Answer Mark the operation and estimate before beginning the exact method.
3. Create a new example that tests the same idea as: Calculate $8,736 \div 24$.
Answer Answers vary. The example and solution must preserve the mathematical structure.
4. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
5. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
