

Revisit decimal calculation

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Calculate $34.75 + 8.906$. Copy or complete the first step.

2. Calculate $50 - 17.485$.

3. Calculate 6.4×7 .

4. Miro says: Miro lines up the final digits rather than the decimal points. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Calculate $34.75 + 8.906$. Copy or complete the first step.
Answer 43.656.
2. Calculate $50 - 17.485$.
Answer 32.515.
3. Calculate 6.4×7 .
Answer 44.8.
4. Miro says: Miro lines up the final digits rather than the decimal points. Is this correct? Explain.
Answer Align decimal points so ones, tenths, hundredths and thousandths stay in their columns.

Revisit decimal calculation

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Calculate $50 - 17.485$.

2. Calculate 6.4×7 .

3. A number divided by 8 is 3.75. What is the number?

4. Identify and correct this misconception: Miro lines up the final digits rather than the decimal points.

5. Write a complete sentence explaining how you checked one answer.

Teacher answers and checking prompts

1. Calculate $50 - 17.485$.

Answer 32.515.

2. Calculate 6.4×7 .

Answer 44.8.

3. A number divided by 8 is 3.75. What is the number?

Answer 30.

4. Identify and correct this misconception: Miro lines up the final digits rather than the decimal points.

Answer Align decimal points so ones, tenths, hundredths and thousandths stay in their columns.

5. Write a complete sentence explaining how you checked one answer.

Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.

Revisit decimal calculation

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. A number divided by 8 is 3.75. What is the number?

2. Explain why this reasoning fails: Miro lines up the final digits rather than the decimal points.

3. Create a new example that tests the same idea as: Calculate 6.4×7 .

4. Find a second method or representation. Compare its efficiency with your first method.

5. Write one always, sometimes or never statement about today's learning and justify it.

Teacher answers and checking prompts

1. A number divided by 8 is 3.75. What is the number?

Answer 30.

2. Explain why this reasoning fails: Miro lines up the final digits rather than the decimal points.

Answer Align decimal points so ones, tenths, hundredths and thousandths stay in their columns.

3. Create a new example that tests the same idea as: Calculate 6.4×7 .

Answer Answers vary. The example and solution must preserve the mathematical structure.

4. Find a second method or representation. Compare its efficiency with your first method.

Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.

5. Write one always, sometimes or never statement about today's learning and justify it.

Answer Answers vary. A valid example and counterexample should support the classification.
