

Solve ratio problems

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Use multiplicative relationships, ratio notation and equivalent ratios.

2. There are 8 red and 12 blue counters. Write red to blue as a ratio.

3. Explain the first step you would take for: Paint is mixed red to white in the ratio 3:5. How much white is needed with 18 ml red?

4. Miro says: Miro adds the same number to both parts to make an equivalent ratio. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Use multiplicative relationships, ratio notation and equivalent ratios.
Answer Pupil identifies a relevant fact, representation or method.
2. There are 8 red and 12 blue counters. Write red to blue as a ratio.
Answer 8:12, which simplifies to 2:3.
3. Explain the first step you would take for: Paint is mixed red to white in the ratio 3:5. How much white is needed with 18 ml red?
Answer Identify which quantities the ratio compares and keep their order.
4. Miro says: Miro adds the same number to both parts to make an equivalent ratio. What should Miro check?
Answer Equivalent ratios come from multiplying or dividing both parts by the same factor.
