

Find the area of triangles

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Calculate areas of rectangles and use dimensions and formulae accurately.

2. A triangle has area 54 cm^2 and base 12 cm . Find its perpendicular height.

3. Explain the first step you would take for: Find the area of a triangle with base 15 cm and perpendicular height 8 cm .

4. Miro says: Miro uses the sloping side as the height and forgets to halve a triangle's area. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Calculate areas of rectangles and use dimensions and formulae accurately.
Answer Pupil identifies a relevant fact, representation or method.
2. A triangle has area 54 cm² and base 12 cm. Find its perpendicular height.
Answer 9 cm.
3. Explain the first step you would take for: Find the area of a triangle with base 15 cm and perpendicular height 8 cm.
Answer Identify the required measure and mark the relevant lengths.
4. Miro says: Miro uses the sloping side as the height and forgets to halve a triangle's area. What should Miro check?
Answer Mark the perpendicular height, use base times height, and divide by two only for a triangle.
