

Use angles on a line and around a point

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Recognise angle relationships and describe circles and two-dimensional shapes.

2. One angle where two straight lines cross is 68 degrees. Find the vertically opposite angle.

3. Explain the first step you would take for: Angles around a point are 85 degrees, 140 degrees and x . Find x .

4. Miro says: Miro estimates from the drawing even when the diagram is not to scale. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Recognise angle relationships and describe circles and two-dimensional shapes.
Answer Pupil identifies a relevant fact, representation or method.
2. One angle where two straight lines cross is 68 degrees. Find the vertically opposite angle.
Answer 68 degrees.
3. Explain the first step you would take for: Angles around a point are 85 degrees, 140 degrees and x . Find x .
Answer Mark known properties and angle facts on the diagram.
4. Miro says: Miro estimates from the drawing even when the diagram is not to scale. What should Miro check?
Answer Use labelled values and known geometric facts, then check the total angle relationship.
