

Calculate the mean

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Interpret and construct statistical representations and calculate the mean.

2. Dataset A has mean 24 over 8 values. Dataset B has total 207 over 9 values. Which mean is greater?

3. Explain the first step you would take for: Find the mean of 12, 15, 18, 11 and 19.

4. Miro says: Miro divides by the largest value instead of the number of values when finding the mean. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Interpret and construct statistical representations and calculate the mean.
Answer Pupil identifies a relevant fact, representation or method.
2. Dataset A has mean 24 over 8 values. Dataset B has total 207 over 9 values. Which mean is greater?
Answer Dataset A: 24; Dataset B: 23, so A is greater.
3. Explain the first step you would take for: Find the mean of 12, 15, 18, 11 and 19.
Answer Read the title, labels, scale and total before calculating.
4. Miro says: Miro divides by the largest value instead of the number of values when finding the mean. What should Miro check?
Answer Add every value, count how many values there are, then divide the total by that count.
