

Solve statistical problems

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Interpret and construct statistical representations and calculate the mean.

2. A line graph rises from 18 to 46. What is the increase?

3. Explain the first step you would take for: Dataset A has mean 24 over 8 values. Dataset B has total 207 over 9 values. Which mean is greater?

4. Miro says: Miro divides by the largest value instead of the number of values when finding the mean. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Interpret and construct statistical representations and calculate the mean.

Answer Pupil identifies a relevant fact, representation or method.

2. A line graph rises from 18 to 46. What is the increase?

Answer 28.

3. Explain the first step you would take for: Dataset A has mean 24 over 8 values. Dataset B has total 207 over 9 values. Which mean is greater?

Answer Read the title, labels, scale and total before calculating.

4. Miro says: Miro divides by the largest value instead of the number of values when finding the mean. What should Miro check?

Answer Add every value, count how many values there are, then divide the total by that count.
