

Apply Year 6 reasoning

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: A £640 item is reduced by 12.5%. Find the sale price. Copy or complete the first step.

2. A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.

3. Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.

4. Miro says: Miro records a general target such as 'get better at maths'. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: A £640 item is reduced by 12.5%. Find the sale price. Copy or complete the first step.
Answer £560.
2. A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.
Answer 9 cm.
3. Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.
Answer $\frac{3}{4}$ or 0.75.
4. Miro says: Miro records a general target such as 'get better at maths'. Is this correct? Explain.
Answer Use assessment evidence to name the exact concept, method, example and support required next.

Apply Year 6 reasoning

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. A £640 item is reduced by 12.5%. Find the sale price.

6. Check this result using an inverse, estimate or known fact: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.

2. A cuboid has volume 756 cm^3 , length 12 cm and width 7 cm. Find its height.

7. Prove or explain your reasoning: Solve $5x + 8 = 73$ and convert 3.45 km to metres.

3. Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.

8. Identify and correct this misconception: Miro records a general target such as 'get better at maths'.

4. Solve this independently and show every stage: A £640 item is reduced by 12.5%. Find the sale price.

9. Write a complete sentence explaining how you checked one answer.

5. Use a second method or representation for: A cuboid has volume 756 cm^3 , length 12 cm and width 7 cm. Find its height.

10. Write and solve a similar question to: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.

Teacher answers and checking prompts

1. A £640 item is reduced by 12.5%. Find the sale price.
Answer £560.
2. A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.
Answer 9 cm.
3. Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.
Answer $\frac{3}{4}$ or 0.75.
4. Solve this independently and show every stage: A £640 item is reduced by 12.5%. Find the sale price.
Answer £560.
5. Use a second method or representation for: A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.
Answer Expected result: 9 cm. Method or representation may vary.
6. Check this result using an inverse, estimate or known fact: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.
Answer Expected result: $\frac{3}{4}$ or 0.75. A valid check must be shown.
7. Prove or explain your reasoning: Solve $5x + 8 = 73$ and convert 3.45 km to metres.
Answer $x = 13$ and 3,450 m. The explanation must show why the method works.
8. Identify and correct this misconception: Miro records a general target such as 'get better at maths'.
Answer Use assessment evidence to name the exact concept, method, example and support required next.
9. Write a complete sentence explaining how you checked one answer.
Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.
10. Write and solve a similar question to: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.
Answer Answers vary. The new question must use the same mathematical structure and include a correct solution.

Apply Year 6 reasoning

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Prove or explain your reasoning: Solve $5x + 8 = 73$ and convert 3.45 km to metres.

6. Create a new example that tests the same idea as: Calculate $2 \frac{1}{4}$ divided by 3, then write the answer as a decimal.

2. Prove the answer to this question, rather than only calculating it: A £640 item is reduced by 12.5%. Find the sale price.

7. Find a second method or representation. Compare its efficiency with your first method.

3. Solve this in two different ways and compare them: A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.

8. Write one always, sometimes or never statement about today's learning and justify it.

4. Work backwards from the answer to reconstruct the question: $\frac{3}{4}$ or 0.75.

9. Create a believable incorrect solution. Identify the exact step where the reasoning breaks.

5. Explain why this reasoning fails: Miro records a general target such as 'get better at maths'.

10. Change one value or condition in a question. Explain what changes in the solution and what stays the same.

Teacher answers and checking prompts

1. Prove or explain your reasoning: Solve $5x + 8 = 73$ and convert 3.45 km to metres.
Answer $x = 13$ and 3,450 m. The explanation must show why the method works.
2. Prove the answer to this question, rather than only calculating it: A £640 item is reduced by 12.5%. Find the sale price.
Answer Expected result: £560. Proof or justification must match the lesson structure.
3. Solve this in two different ways and compare them: A cuboid has volume 756 cm³, length 12 cm and width 7 cm. Find its height.
Answer Expected result: 9 cm. Two valid methods and a comparison are required.
4. Work backwards from the answer to reconstruct the question: $\frac{3}{4}$ or 0.75.
Answer One valid reconstruction is: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal. Other equivalent questions are acceptable.
5. Explain why this reasoning fails: Miro records a general target such as 'get better at maths'.
Answer Use assessment evidence to name the exact concept, method, example and support required next.
6. Create a new example that tests the same idea as: Calculate $2\frac{1}{4}$ divided by 3, then write the answer as a decimal.
Answer Answers vary. The example and solution must preserve the mathematical structure.
7. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
8. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
9. Create a believable incorrect solution. Identify the exact step where the reasoning breaks.
Answer Answers vary. The error must be mathematically relevant and the correction must be precise.
10. Change one value or condition in a question. Explain what changes in the solution and what stays the same.
Answer Answers vary. The explanation must distinguish the mathematical structure from the changed value.
