

Read and write numbers to ten million

Use the scaffold, show each step and ask for an adult check when marked.

Name: _____ Date: _____

1. Read the model: Read 6,407,215 aloud and write it in words. Copy or complete the first step.

2. Write 8,030,006 in words.

3. Write in digits: five million, two hundred thousand and nineteen.

4. Miro says: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen. Is this correct? Explain.

Teacher answers and checking prompts

1. Read the model: Read 6,407,215 aloud and write it in words. Copy or complete the first step.
Answer Six million, four hundred and seven thousand, two hundred and fifteen.
2. Write 8,030,006 in words.
Answer Eight million, thirty thousand and six.
3. Write in digits: five million, two hundred thousand and nineteen.
Answer 5,200,019.
4. Miro says: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen. Is this correct? Explain.
Answer The zero holds the ten-thousands place, so the middle period is four hundred and seven thousand.

Read and write numbers to ten million

Work independently. Show a complete method and check at least one answer.

Name: _____ Date: _____

1. Read 6,407,215 aloud and write it in words.

6. Check this result using an inverse, estimate or known fact: Write in digits: five million, two hundred thousand and nineteen.

2. Write 8,030,006 in words.

7. Use 8, 8, 0, 0, 3, 1 and 5 once each to make the smallest seven-digit number.

3. Write in digits: five million, two hundred thousand and nineteen.

8. Identify and correct this misconception: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen.

4. Solve this independently and show every stage: Read 6,407,215 aloud and write it in words.

9. Write a complete sentence explaining how you checked one answer.

5. Use a second method or representation for: Write 8,030,006 in words.

10. Write and solve a similar question to: Write in digits: five million, two hundred thousand and nineteen.

Teacher answers and checking prompts

1. Read 6,407,215 aloud and write it in words.
Answer Six million, four hundred and seven thousand, two hundred and fifteen.
2. Write 8,030,006 in words.
Answer Eight million, thirty thousand and six.
3. Write in digits: five million, two hundred thousand and nineteen.
Answer 5,200,019.
4. Solve this independently and show every stage: Read 6,407,215 aloud and write it in words.
Answer Six million, four hundred and seven thousand, two hundred and fifteen.
5. Use a second method or representation for: Write 8,030,006 in words.
Answer Expected result: Eight million, thirty thousand and six. Method or representation may vary.
6. Check this result using an inverse, estimate or known fact: Write in digits: five million, two hundred thousand and nineteen.
Answer Expected result: 5,200,019. A valid check must be shown.
7. Use 8, 8, 0, 0, 3, 1 and 5 once each to make the smallest seven-digit number.
Answer 1,003,588.
8. Identify and correct this misconception: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen.
Answer The zero holds the ten-thousands place, so the middle period is four hundred and seven thousand.
9. Write a complete sentence explaining how you checked one answer.
Answer Answer should name an inverse, estimate, boundary, known fact or equivalent representation.
10. Write and solve a similar question to: Write in digits: five million, two hundred thousand and nineteen.
Answer Answers vary. The new question must use the same mathematical structure and include a correct solution.

Read and write numbers to ten million

Prove, compare or generalise. Write enough reasoning for another pupil to follow.

Name: _____ Date: _____

1. Use 8, 8, 0, 0, 3, 1 and 5 once each to make the smallest seven-digit number.

6. Create a new example that tests the same idea as: Write in digits: five million, two hundred thousand and nineteen.

2. Prove the answer to this question, rather than only calculating it: Read 6,407,215 aloud and write it in words.

7. Find a second method or representation. Compare its efficiency with your first method.

3. Solve this in two different ways and compare them: Write 8,030,006 in words.

8. Write one always, sometimes or never statement about today's learning and justify it.

4. Work backwards from the answer to reconstruct the question: 5,200,019.

9. Create a believable incorrect solution. Identify the exact step where the reasoning breaks.

5. Explain why this reasoning fails: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen.

10. Change one value or condition in a question. Explain what changes in the solution and what stays the same.

Teacher answers and checking prompts

1. Use 8, 8, 0, 0, 3, 1 and 5 once each to make the smallest seven-digit number.
Answer 1,003,588.
2. Prove the answer to this question, rather than only calculating it: Read 6,407,215 aloud and write it in words.
Answer Expected result: Six million, four hundred and seven thousand, two hundred and fifteen. Proof or justification must match the lesson structure.
3. Solve this in two different ways and compare them: Write 8,030,006 in words.
Answer Expected result: Eight million, thirty thousand and six. Two valid methods and a comparison are required.
4. Work backwards from the answer to reconstruct the question: 5,200,019.
Answer One valid reconstruction is: Write in digits: five million, two hundred thousand and nineteen. Other equivalent questions are acceptable.
5. Explain why this reasoning fails: Miro reads 6,407,215 as six million, forty-seven thousand, two hundred and fifteen.
Answer The zero holds the ten-thousands place, so the middle period is four hundred and seven thousand.
6. Create a new example that tests the same idea as: Write in digits: five million, two hundred thousand and nineteen.
Answer Answers vary. The example and solution must preserve the mathematical structure.
7. Find a second method or representation. Compare its efficiency with your first method.
Answer Answers vary. Comparison should refer to accuracy, number structure and clarity.
8. Write one always, sometimes or never statement about today's learning and justify it.
Answer Answers vary. A valid example and counterexample should support the classification.
9. Create a believable incorrect solution. Identify the exact step where the reasoning breaks.
Answer Answers vary. The error must be mathematically relevant and the correction must be precise.
10. Change one value or condition in a question. Explain what changes in the solution and what stays the same.
Answer Answers vary. The explanation must distinguish the mathematical structure from the changed value.
