

Estimate calculations by rounding

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Round whole numbers to the nearest 10, 100, 1,000, 10,000 and 100,000.

2. Estimate $8,102 \times 49$ using convenient rounded numbers.

3. Explain the first step you would take for: Estimate $398,742 + 203,118$ by rounding each number to the nearest 100,000.

4. Miro says: Miro believes an estimate must equal the exact answer. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Round whole numbers to the nearest 10, 100, 1,000, 10,000 and 100,000.
Answer Pupil identifies a relevant fact, representation or method.
2. Estimate $8,102 \times 49$ using convenient rounded numbers.
Answer $8,000 \times 50 = 400,000$.
3. Explain the first step you would take for: Estimate $398,742 + 203,118$ by rounding each number to the nearest 100,000.
Answer Underline the place named in the question.
4. Miro says: Miro believes an estimate must equal the exact answer. What should Miro check?
Answer An estimate is deliberately approximate and should show the likely size of the exact answer.
