

Check with inverse operations

Adult-led preparation before the main lesson. Use precise vocabulary and one step at a time.

Name: _____ Date: _____

1. Which prior skill will help with today's lesson? Recall number facts and use place value, partitioning, compensation and inverse operations.

2. Check $4,398 + 6,725 = 11,123$.

3. Explain the first step you would take for: Check $7,056 \div 24 = 294$.

4. Miro says: Miro repeats the same operation and calls it an inverse check. What should Miro check?

Teacher answers and checking prompts

1. Which prior skill will help with today's lesson? Recall number facts and use place value, partitioning, compensation and inverse operations.

Answer Pupil identifies a relevant fact, representation or method.

2. Check $4,398 + 6,725 = 11,123$.

Answer $11,123 - 6,725 = 4,398$.

3. Explain the first step you would take for: Check $7,056 \div 24 = 294$.

Answer Notice the number structure before choosing a method.

4. Miro says: Miro repeats the same operation and calls it an inverse check. What should Miro check?

Answer Use the opposite operation so the result returns to the starting value.
